

How our **IoT Surveillance Solutions** helped improve security at a leading **PRIVATE BANK**

CLIENT OVERVIEW

A leading private sector bank in India, our client currently consolidates total assets surpassing Rs 14 trillion. With a network of 5000+ branches & 15000+ ATMs across India, offering a wide range of banking products & financial services to corporate & retail customers through a variety of delivery channels and its group companies.

CLIENT REQUIREMENTS & SOLUTION OVERVIEW

Our client required a solution that could help them manage & monitor their 300+ retail banking branches & 200 rural banking branches while scheduling their devices to be in arm mode after work hours. They needed a solution that would integrate multiple sites on a unified platform for simultaneous monitoring while managing energy consumption at different locations.

Our solution was an amalgamation of fire safety, access control, energy management & video surveillance solutions. It helped our client manage their assets across multiple sites, get live device health updates and monitor the energy consumption of 300+ sites on a single platform.

CHALLENGES

- No integrated infrastructure management
- Required an upgrade from analog to IP system
- Their PAN India presence required a vendor with a similar presence
- Lack of energy management solution

OUR SOLUTION

- IP cameras with smart detection and integration capabilities
- Scheduling of signage timings to reduce manual interference
- Energy management solution with regular reports
- A combination of access control, fire safety, energy monitoring & CCTV solutions
- Real-time device health check updates for all sites
- Single, unified platform for centralization of all security data

THE RESULT

96% compliance to security device uptime

Real-time alerts across 500+ sites

94% compliance to network, NVR & camera health checks

94% compliance to signage schedule
